TECHNICAL SKILLS

Languages: Java, SQL, MongoDB, PostgreSQL, Python, HTML, CSS, JS, C, C#, TypeScript, Data Structures, OOPS.
Frameworks: Spring Boot, Hibernate, JPA, RESTful APIs, Microservices, Apache Kafka, React.js, Node.js, ASP.NET.
Developer Tools: Git, GitHub, AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, CI/CD, SQL Server, Grafana, Prometheus, Splunk, New Relic, Jira, Confluence, Postman, Swagger, JUnit, Mockito.
Libraries/Concepts: OAuth2, JWT, System Design, Design Patterns, Agile/Scrum.

EXPERIENCE

Associate Software Engineer

Oct 2023 - Jul 2025

Innominds Software Pvt. Ltd.

Hyderabad, India

- Designed and deployed a KYC microservice using Java & Spring Boot, integrating third-party identity APIs that reduced average onboarding time from 2 days to under 4 hours ($\approx 90\%$), and eliminated 20+ manual verification steps per user and documented APIs with Swagger.
- Refactored and indexed MongoDB and PostgreSQL queries, reducing database latency by 40% and boosting API throughput by 50%, ensuring high-performance, scalable backend services.
- Implemented Apache Kafka for event-driven data pipelines, enabling real-time synchronization across services handling thousands of requests per minute, monitoring with Prometheus, Grafana for API performance.
- Delivered secure, production-ready payment integrations for Google Pay, leveraging AWS (EC2, S3, Lambda), Docker, and Kubernetes with automated CI/CD pipelines that reduced deployment time from hours to minutes.
- Improved code reliability by raising test coverage from 55% to 85% through unit and integration testing (JUnit, Mockito), decreasing production incidents by 35% in 6 months.

Gen AI Model Trainer (Freelance)

Apr 2025 - May 2025

Soul AI

Remote

- Enhanced AI model precision and reduced hallucination rates by 30% through Reinforcement Learning from Human Feedback (RLHF) and fine-tuned NLP pipelines, and pioneered prompt engineering techniques to improve RLHF-driven model outputs, ensuring context-aware and reliable natural language generation.
- Collaborated cross-functionally to monitor, evaluate, and fine-tune model performance, enabling faster and more consistent production releases, and led initiatives to optimize AI responses in real-world applications, significantly improving user's trust.

Software Engineer Intern

Feb 2023 - Sep 2023

Virtusa Consulting Services Pvt. Ltd.

Remote

- Built file-driven ingestion services using Node.js and TypeScript to process files from SFTP, parse large payloads into individual records, and route them dynamically to backend workflows, monitored throughput and failures via Splunk and New Relic.
- Designed transactional backend workflows with multiple processing steps, external API integrations, and SQL persistence & enabled traceability, automated recovery, and observed execution time ($\approx 3s/record$) and less than 0.1% failure rate via New Relic metrics and distributed tracing.
- Implemented human-in-the-loop pause/resume via a React.js operational UI, allowing decision review and workflow resumption, reducing manual intervention by ($\approx 70\%$).

SELECTED PROJECTS (GitHub: <https://github.com/vamsikadaru>)

in-Krypt: Blockchain-Based P2P Lending Platform | JS, ASP.NET, C#, CSS, Solidity Dec 2022 – Apr 2023

- Developed Ethereum smart contracts to automate lending, borrowing, and collateral management, executing 100+ test transactions with a 15% reduction in gas cost via optimized Solidity logic.
- Built a decentralized loan processing system ensuring transparency and zero intermediary dependency, improving transaction trust and security.

EDUCATION

University of Cincinnati

Aug 2025 – May 2026

Master of Engineering in Computer Science | GPA: 3.83/4.0

Cincinnati, OH

Course work: Advanced Algorithms, Artificial Intelligence, Machine Learning, Software Test & QA, Cloud Computing, Distributed Operating Systems.
